

AREA OF A

TRIANGLE

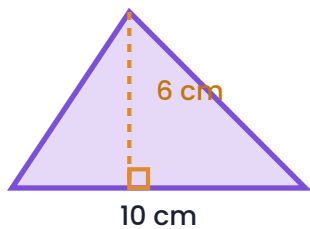

*Half a
parallelogram.*

The area of a triangle is the amount of space inside the shape. Two identical triangles fit together to make a parallelogram, so a triangle is half of base $\times$ height.

$$A = \frac{1}{2} \times b \times h$$

where b is the base and h is the perpendicular height

EXAMPLE

Base (b) = 10 cm

Height (h) = 6 cm

Area = $\frac{1}{2} \times b \times h$

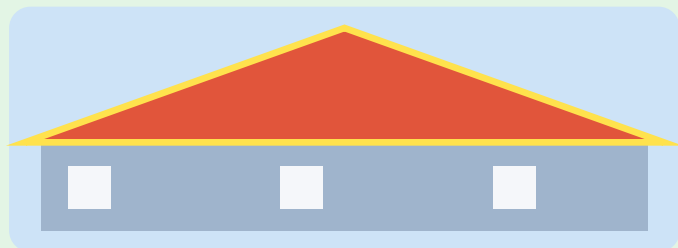

$A = \frac{1}{2} \times 10 \times 6$

$A = 30 \text{ cm}^2$

The area is 30 cm².
