

NETS &

*Unfold it.
Add it up.*

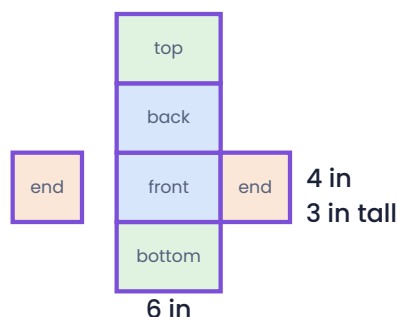

SURFACE AREA

Surface area is the total area of every face on the outside of a solid. Unfold the solid into a flat net, find the area of each face, and add them together. Always in square units.

$$SA = 2(lw) + 2(lh) + 2(wh)$$

for a rectangular prism: 6 faces in 3 matching pairs

EXAMPLE

Length = 6 in, width = 4 in

Height = 3 in

$$2(6 \times 4) = 48$$

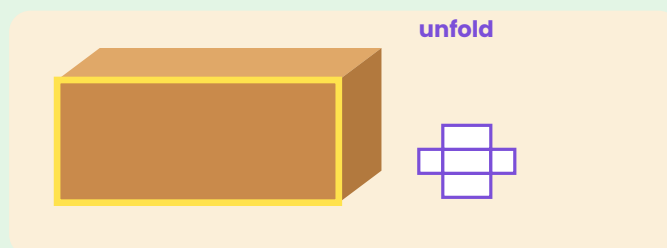

$$2(6 \times 3) = 36, 2(4 \times 3) = 24$$

$$SA = 48 + 36 + 24 = 108 \text{ in}^2$$

The surface area is 108 in².
