

AREA OF A PARALLELOGRAM

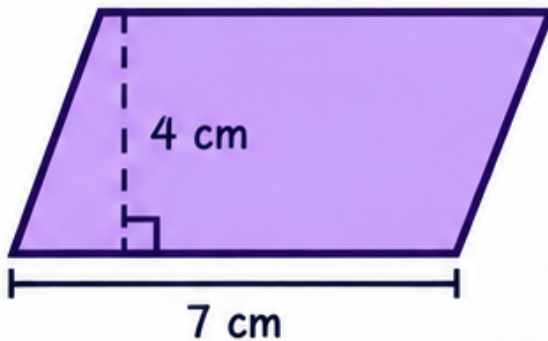

Same
base.
Same
height.

The **area** of a parallelogram is the amount of space inside the shape. It is found by multiplying the base by the height.

$$A = b \times h$$

where b is the base and h is the height.

EXAMPLE

Base (b) = 7 cm

Height (h) = 4 cm

Area = $b \times h$

$A = 7 \times 4$

$A = 28 \text{ cm}^2$

The area is 28 cm^2 .
