

AREA OF A SQUARE

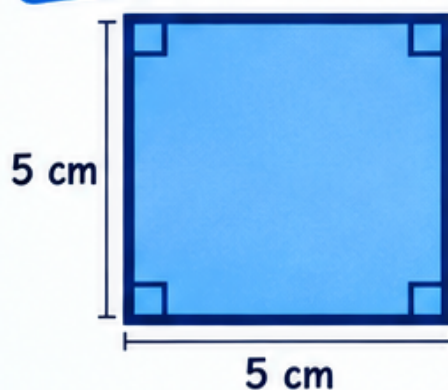

Same
sides.
Same
area.

The **area** of a square is the amount of space inside the square. It is found by multiplying the side length by itself.

$$A = s^2$$

where s is the length of a side.

EXAMPLE

Side length (s) = 5 cm

$$\text{Area} = s^2$$

$$A = 5^2$$

$$A = 25 \text{ cm}^2$$

The area is 25 cm².
