

Division Unlocks the Missing Side

ELA + MATH · WORD STUDY

Mr. H Math · Day 6

CCSS

6.G.A.1

6.EE.A.2c

L.6.4

WRITE YOUR NAME — one letter per box, straight and neat

Date: _____

Score: ____ / 10

Yesterday, multiplication **grew** two numbers into an area. Today we run that idea backward: division **un-grows** an area back into a missing side. Every blank you fill in today unlocks a word we'll use for the rest of the Area unit — so read closely and choose your words carefully!

Section A · Guess the Word

Fill in the blanks to find the word division describes.

I

N

V

R

S

Write the two missing letters in the empty boxes.

Division is the _____ of multiplication.

It undoes what multiplication did — that's how we work backward to a missing side.

Section B · Meet the Division Family

Use the word bank to complete each sentence.

area

known side

missing side

quotient

- If we know the _____ of a rectangle and one side, we can always find the other side.
Example: Area = 48 sq ft, one side = 8 ft.
- Dividing the area by the known side always leaves the _____ — the side we didn't know yet.
Example: $48 \div 8 = 6$, so the missing side is 6 ft.
- The answer to a division problem is called the _____ — the number that results from dividing.
Example: $48 \div 8 = 6$, so 6 is the quotient.

Section C · Try It: Area ÷ Height

Label the worked example, then solve your own.

Area = 24 sq units, height = 4 → base = ?

$$24 \div 4 = 6$$

↑ area ↑ known side ↑ missing side (base)

Your turn: A rectangle has an area of 30 sq ft and a height of 5 ft. Draw the rectangle on the grid, using the correct base. Then write the division sentence and label the area, known side, and missing side.

base = 4, height = 6
Area = 24 sq units

EXPLORE · SUMMARY

Division doesn't stop at plain rectangles — it also finds the hidden pieces inside a **composite** floor. A reading corner is shaped like an L: the whole rectangle around it is **10 ft × 8 ft**, but a **4 ft × 3 ft** closet is cut out of one corner. Find the big rectangle's area, subtract the closet's area, and what's left is the reading corner — that's composite area, and it's where Day Six is headed next.

☆ **Division undoes multiplication — one side at a time!** ☆
