

WRITE YOUR NAME — one letter per box, straight and neat

Date: _____

Score: ____ / 10

Before we grow rectangles into **areas** later this unit, let's grow our **multiplication vocabulary**. Every blank you fill in today unlocks a word we'll use all the way through the Area unit — so read closely and choose your words carefully!

Section A · Guess the Word

Fill in the blank to find the word multiplication describes.

G

O

T

H

Write the two missing letters in the empty boxes.

Multiplication means _____.

Group by group, a small number GROWS into a much bigger total.

Section B · Meet the Multiplication Family

Use the word bank to complete each sentence.

number of groups

size of each group

product

growth

1

In a multiplication problem, the **first factor** tells us the _____ we are combining.
Example: in 4×3 , the first factor is 4.

2

The **second factor** (the multiplicand) tells us the _____ — how many are inside each group.
Example: in 4×3 , the second factor is 3.

3

The answer to a multiplication problem is called the _____ — the total that results from multiplying.
Example: $4 \times 3 = 12$, so 12 is the product.

Section C · Try It: 4×3

Label each part of the example, then try your own.

group 1

group 2

group 3

group 4

$4 \times 3 = 12$

↑
number of
groups

↑
size of
each group

↑
product

4 groups of 3 dots is the same as adding $3 + 3 + 3 + 3 = 12$. That's why $4 \times 3 = 12$.

Your turn: Draw 5 groups of 2 dots in the space below. Then write the multiplication sentence and label the number of groups, the size of each group, and the product.

EXPLORE · SUMMARY

Multiplication doesn't stop at dots and groups — it **grows** right into **AREA**. Line those same 4 groups of 3 up into neat rows and columns, and you get a rectangle covering **12 square units**. That's the big idea we'll use all unit long: **Area = base $\times$ height**, which is really just multiplication wearing a rectangle costume!

12

base = 3, height = 4

Area = 12 square units
