

NETS &

*Unfold it.
Add it up.*

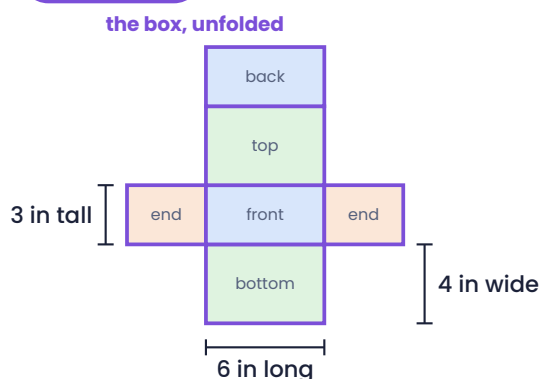

SURFACE AREA

Surface area is the total area of every face on the outside of a solid. Unfold the solid into a flat net, find the area of each face, and add them together. Always in square units.

$$SA = 2(lw) + 2(lh) + 2(wh)$$

for a rectangular prism: 6 faces in 3 matching pairs

EXAMPLE

Length 6 in, width 4 in, height 3 in

top + bottom: $2(6 \times 4) = 48$

front + back: $2(6 \times 3) = 36$

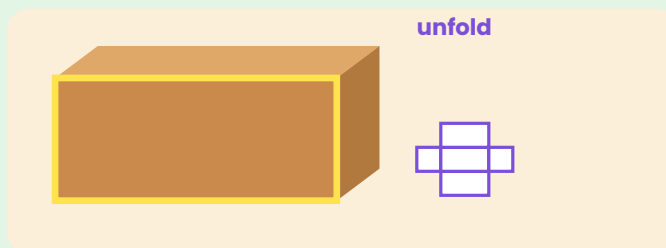

two ends: $2(4 \times 3) = 24$

$SA = 48 + 36 + 24 = 108 \text{ in}^2$

The surface area is 108 in².
