The sixth grade is throwing a party for **90 students**, and every item on the order comes with a ratio. Find each multiplier, name your model, and remember: real orders **round up** — you can't buy half a pizza. Second half of class: **30 minutes of i-Ready**.

FIX ONE ERROR (FROM WEDNESDAY)

3 min

"3 cups juice : 2 cups soda. For $7\frac{1}{2}$ cups juice: $7\frac{1}{2} - 3 = 4\frac{1}{2}$, so $2 + 4\frac{1}{2} = 6\frac{1}{2}$ cups soda." Name the error and fix it.

REFINE • SUMMARY — Real problems hide the multiplier: **divide** to find it, **multiply** both quantities by it, then decide if the answer must be a whole number. Name your model, and check with a second one before you order.

★ Find the multiplier, keep the order, check it a second way! ★
